

State-of-the-art

visual project management

Goalscape Enterprise

The situation in project management

You might be familiar with this scenario: In spite of trained project managers and numerous IT applications, many projects still fail. Project work is often complicated by a failure to revise goals, a lack of communication, or too much bureaucracy. All of this occurs despite theoretically well-thought out methods and the availability of IT tools for the planning and supervision of projects. In practice, however, such tools can only be used with difficulty, or not all, within the dynamic environment of large projects.

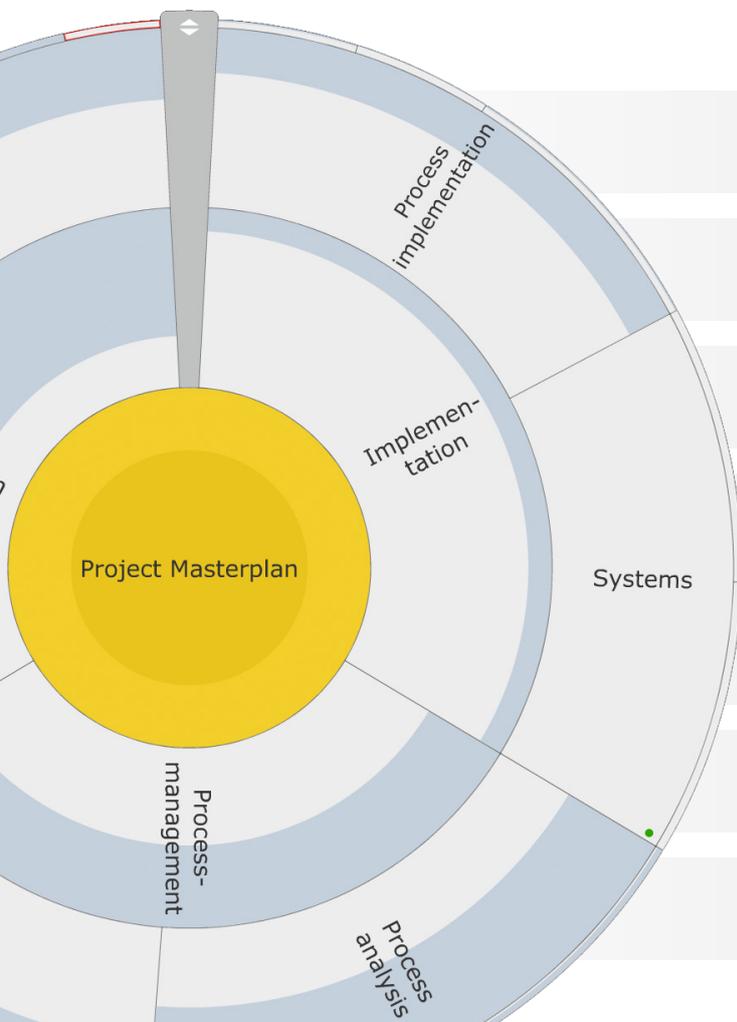

The problem

If the central project plan is not truly up-to-date and binding, it is in practice more harmful than useful. When information

about the status of project tasks flows into extensive reports via Excel queries, and then needs to be frequently adjusted and interpreted by these means, no true or real-time information can be made available on the project's status. "Unsuitable" planning and poor documentation are not caused by the project manager but by using the wrong approach. IT tools and methods are often too centrally fixated on project management, which is unable to integrate all aspects in detail.

Our solution

With **Goalscape Enterprise**, there is now a tool available that can eliminate the weaknesses of many common systems through the following special attributes:

- > State-of-the-art visual project management
- > Excellent visualisation of the goals, activities and status of the "big picture"
- > Real-time status reporting on the basis of decentralized information without further preparation
- > Centralized overview for decentralized planning and supervision
- > Support for collaboration and communication among all parties involved
- > Administration of all documents and decisions with assignment to the correct project element
- > Simple to operate and easy to understand—all stakeholders work with just a single tool

Unique in GOALSCAPE:

a new view of the project!

Goalscape Enterprise is based on the understanding that a successful project is strongly dependent on active interaction between contractors, project management, project staff, and everyone affected by the project. Sustainable project success is only guaranteed when the customer can realize the implemented goals in the long term and independently carry out new processes and organizations once the project has been concluded. Toward this end, **Goalscape Enterprise** links all stakeholders through a simple IT tool.

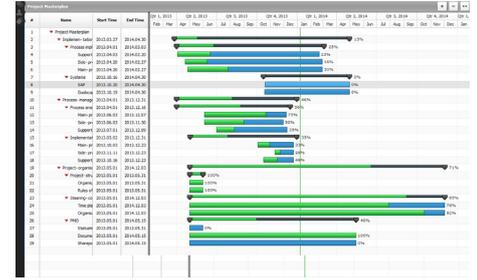

Goalscape Enterprise is a server-based application that makes it possible to call up a permanent real-time status report and transparently present the activities of the entire project. Furthermore, it makes it possible for management to decide on a potentially necessary realignment of the goals in a speedy and results-orientated manner.

Unique in Goalscape Enterprise - the new view of the project

For project visualization, **Goalscape Enterprise** offers a completely different result from that of classic project management systems. The goals, result types (products), and tasks are presented in different levels, and the sizes of the segments reflect their priority. With such presentation, goals

can be planned and visualized in a nonlinear manner in one system. Presenting different levels enables a quick visualization of progress.

Progress on the project can be viewed at a glance, and potential backlogs are readily identified. The form of the presentation provides a good overview of the "big picture" and is especially helpful for projects with many individual components.

The classic presentation form of the Gantt chart is also possible.

The form of the presentation provides a good overview of the "big picture" and is especially helpful for projects with many individual components.

The bps project management methodology

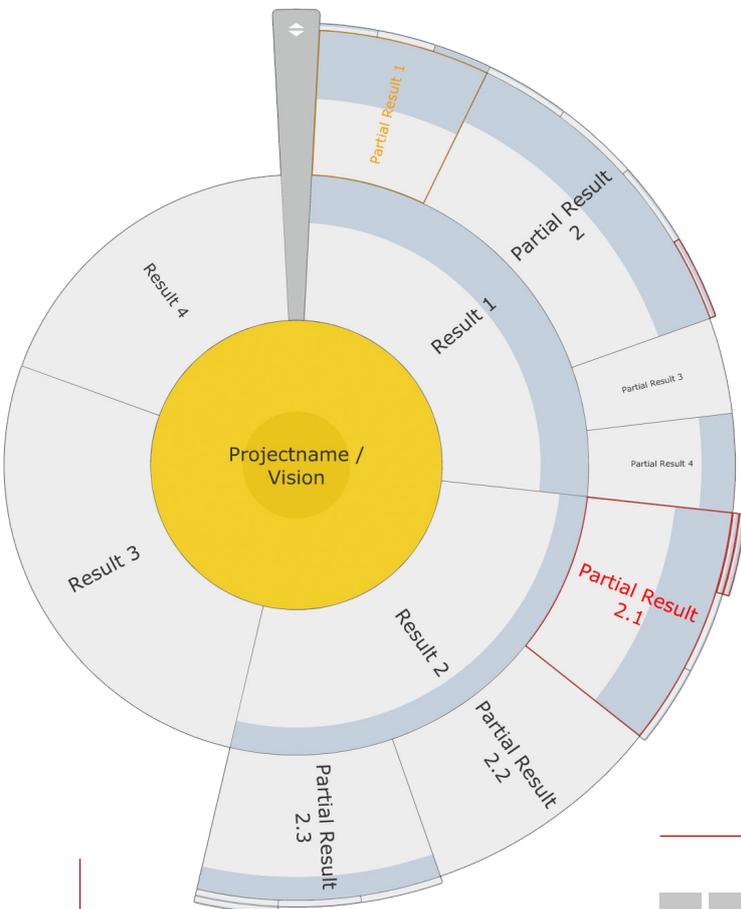

As a longtime partner in process and project management, bps business process solutions GmbH relies on a special form of project management. Focusing on the requirements of the customer both during and after the project, maximum coverage of all changing customer requirements is the key concern. With this approach, bps lives and breathes the vital attributes of agile projects and links them with the methods of classic project management. For the technical presentation of this special interpretation of project management, bps has formed a development partnership with Goalscape Software GmbH. The objective of this partnership is to implement the requirements of bps's philosophy under the name ProjectTurtle via **Goalscape Enterprise**.

In this development partnership, **Goalscape Enterprise** is not just a tool but also the connecting link that successfully combines integrative project work with active project management.

Please contact us if you would like more information about **Goalscape Enterprise** or the project management method of bps GmbH's ProjectTurtle.
